

Practical course

Systems Programming

(WiSe 2023/24)

Preliminary meeting

Chair of Distributed Systems and Operating Systems

<https://dse.in.tum.de/>

IMPORTANT

This course is not offered to *IN2397* (CSE course)

About us

Chair of Distributed Systems and Operating Systems

Prof. Pramod Bhatotia <https://dse.in.tum.de/>

Jiyang Chen	jiyang.chen@tum.de
Sebastian Reimers	sebastian.reimers@tum.de
Illya	ilya.meignan-masson@mailoo.org
Tianchi Yu	yu-tianchi@outlook.com
Francisco Romão	romao.fr@gmail.com
Emmanouil Giortamis	emmanouil.giortamis@tum.de

Systems programming applications

Internet of things

Transportation

Healthcare

Low level systems programming is an essential building block for high level applications

Software core properties

Performance

Reliability

Security

Efficient low level systems programming is critical to ensure these properties

System stack

Systems programming spans in multiple system levels and application domains

Time to get hands-on experience!

Course topics

- This course covers some of the most important aspects of systems programming:

Kernel and system calls

File I/O

Concurrency and synchronization

Memory management

Course topics

- This course covers some of the most important aspects of systems programming:

Processes

Networking

Performance profiling

Compilers / LLVM

Lab format

- Lab assignments
 - **8 practical programming exercises**
 - Deadline of 1 - 2 weeks depending on the difficulty/workload
 - Online submission
- Weekly meeting
 - Video with theoretical background coverage
 - Question and answer session to explain and discuss each assignment
 - Slack channel for questions
- Assessment:
 - **8 programming assignments (100%)** with public & private unit tests
 - No further exam / quiz / projects

Assignment examples (Actual tasks may change)

- Implement some functionalities of a filesystem
- Conversion of a single-thread program to a multithreaded version using locks
- Write your own memory allocator for better performance
- Implement your own client/server applications
- Use LLVM to write simple compiler passes

Grading system

- Github classroom (<https://classroom.github.com/>)
 - Template repository for each task with detailed instructions & test cases
- Automated tests
 - Points are distributed among the exercises based on the estimated workload (30-60 points)
 - Specially designed test cases with gradually increasing difficulty
 - Hidden tests to detect & prevent gaming the grading system
- Grading scheme :

From	To	Grade	From	To	Grade
0	100	5.0	176	187	2.7
101	12	4.7	188	200	2.3
113	125	4.3	201	212	2.0
126	137	4.0	213	225	1.7
138	150	3.7	226	237	1.3
151	162	3.3	238	250	1.0
163	175	3.0			

Languages / OS

- Languages
 - Choice between **C, C++ and Rust**
 - Limited choice of allowed libraries (different per language)
 - Can be switched for each task
 - **Some tasks require a specific language**
- OS Environment information
 - All executables must run on **Linux, x86_64**
 - Use virtual machines if you run a different OS (i.e. Hyper-V on Windows)
 - You can also use the remote desktop (lxe.halle.in.tum.de)

Learning goals

- Acquire fundamental knowledge to build robust systems
- Familiarize yourself with end-to-end system design
- Learn techniques for profiling, debugging and optimization of low-level code
- Get a good understanding of memory- and resource management
- Improve hands-on experience through a variety of programming tasks

- Importantly, have fun!

Prerequisites

- We don't have any compulsory pre-requisites, but we prefer
 - **Knowledge equivalent to the lectures**
 - Fundamentals of Programming (IN0002)
 - Introduction to Computer Architecture (IN0004)
 - Basic Principles: Operating Systems and System Software (IN0009)
 - **Programming knowledge**
 - Foundations of programming (C, C++ or Rust)
 - Work in a Linux environment
 - **Knowledge on Git and GitHub**

If the prerequisites are unclear/strict -- please check with the instructor!

Code of conduct

- University plagiarism policy
 - <https://www.in.tum.de/en/current-students/administrative-matters/student-code-of-conduct/>
- Decorum
 - Promote freedom of thoughts and open exchange of ideas
 - Cultivate dignity, understanding and mutual respect, and embrace diversity
 - Racism and bullying will not be tolerated
- **Please write your own code!**

Matching platform

Welcome to the Matching platform matching.in.tum.de/

Dear students,

we changed the name of the course "Seminar: Recent advances in Computer Systems", for consistency reasons. The new name are "Seminar: Hot Topics in Computer Systems", now.
